## **DETAILED ACTION**

### ***Election/Restrictions***

1. Applicant's election of Group III in the reply filed on 11/08/04 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)). Note: applicant withdraws claims 1-19 and adds new claims 20-23 which applicant claims they are read on the elected Group III.

### ***Information Disclosure Statement***

2. The listing of references in the specification is not a proper information disclosure statement. 37 CFR 1.98(b) requires a list of all patents, publications, or other information submitted for consideration by the Office, and MPEP § 609 A(1) states, "the list may not be incorporated into the specification but must be submitted in a separate paper." Therefore, unless the references have been cited by the examiner on form PTO-892, they have not been considered.

### ***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 2823

4. Claims 20-23 are rejected under 35 U.S.C. 102(b) as being anticipated by Hughes et al. US 4,908,242.

The Hughes et al. reference discloses an article manufactured by an improved method for electroless plating of copper on a substrate using an electroless composition for electroless plating of copper on a substrate, said composition comprising copper ions, a complexing agent for  $\text{Cu}^{++}$  ions, a complexing agent for  $\text{Cu}^{+}$  ions (col. 1, lines 53-59, col. 6, lines 37-48, col. 7, lines 5-10, e.g.), and a reducing agent capable of reducing copper ions to metallic copper and hydroxide ions to a pH of at least 10 (col. 1, lines 35-38). Said substrate is heated to a temperature above the operating temperature of the electroless plating bath during the process (col. 4, lines 20-48).

Re claim 23, the procedure and examples of electroless plating on printed circuit board provide at least part of the surface of the substrate is non-metallic.
